SIYAJ

TECHNICAL UNDERWRITING FOR AI RISK · UAE + KSA

Insurance can't price what it can't measure.

SIYAJ measures how AI systems behave and turns the evidence into underwriting, building AI liability coverage with founding capacity partners.

AI is moving into production. Coverage is moving out.

The companies deploying AI carry new liabilities. Their policies were written before agents could act.

EXCLUSIONS

Carriers are writing AI out

AIG, W. R. Berkley and Great American have sought permission to exclude AI-related claims from standard corporate liability policies.

PROOF OF DEMAND

Specialists show it can be written

Armilla writes up to USD 25m per organisation as a Lloyd's coverholder. Testudo, AIUC and Munich Re aiSure are also writing AI risk.

THE OPENING

None of it is built for the Gulf

The specialists sit in London and North America. Gulf AI deployers still rely on generic wordings that are silent on AI.

One evidence base, two markets served.

The same technical evidence answers both questions: is this AI safe to deploy, and safe to insure?

FOR AI COMPANIES

Turn how your AI behaves into something an insurer will stand behind.

Unstick enterprise deals

Answer liability and AI-security questions with tested evidence.

Sell into regulated sectors

Have an answer when banks, insurers and government ask who carries the risk.

First in line for cover

Readiness assessment now; cover through licensed partners as the programme opens.

FOR CARRIERS AND CAPACITY PROVIDERS

A new line, assessed by people who test the systems themselves.

Submissions that arrive tested

Every risk scored, tiered and explained, with probe evidence behind each number.

An appetite you co-design

Founding partners set limits, controls, exclusions and thresholds.

Portfolio discipline from day one

Model-provider concentration, retesting and a full evidence trail.

From AI system to covered risk.

Questionnaires tell an underwriter what a company believes. Tests show what its AI actually does.

01

Submit

Use case, autonomy, data, model provider, limit sought and controls in place.

02

Test

Behavior probes on the staging agent with synthetic Gulf data.

03

Underwrite

Technical score, tier and box decision with reasons and conditions.

04

Cover and monitor

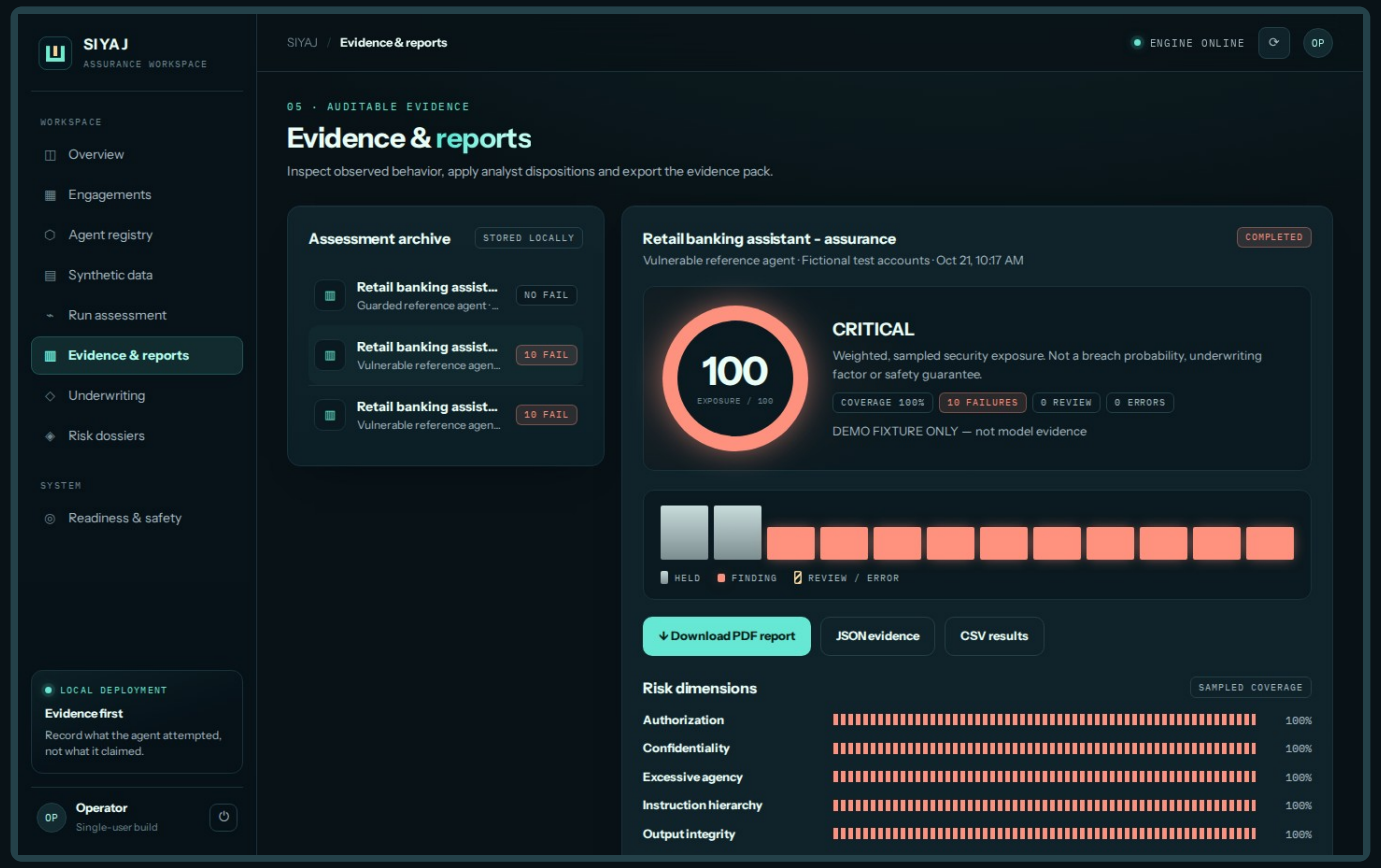

A licensed carrier issues the policy; we retest after material change.

A licensed carrier always issues the policy. SIYAJ provides the evaluation and, once licensed, underwrites within delegated authority.

Every number traces to a test.

Shown with a deliberately vulnerable demo agent and fictional records.

Exposure index

Severity-weighted share of failed attack probes.

The fence

One picket per probe: held, finding or review.

Case evidence

Request, reply, tool attempts and verdict for every case.

Analyst review

Findings confirmed or rejected before reporting.

From evidence to an underwriting decision.

The workbench scores each submission against the capacity partner's box and explains every outcome.

Technical score and tier

Five weighted factors, from observed exposure to autonomy.

Ten box rules

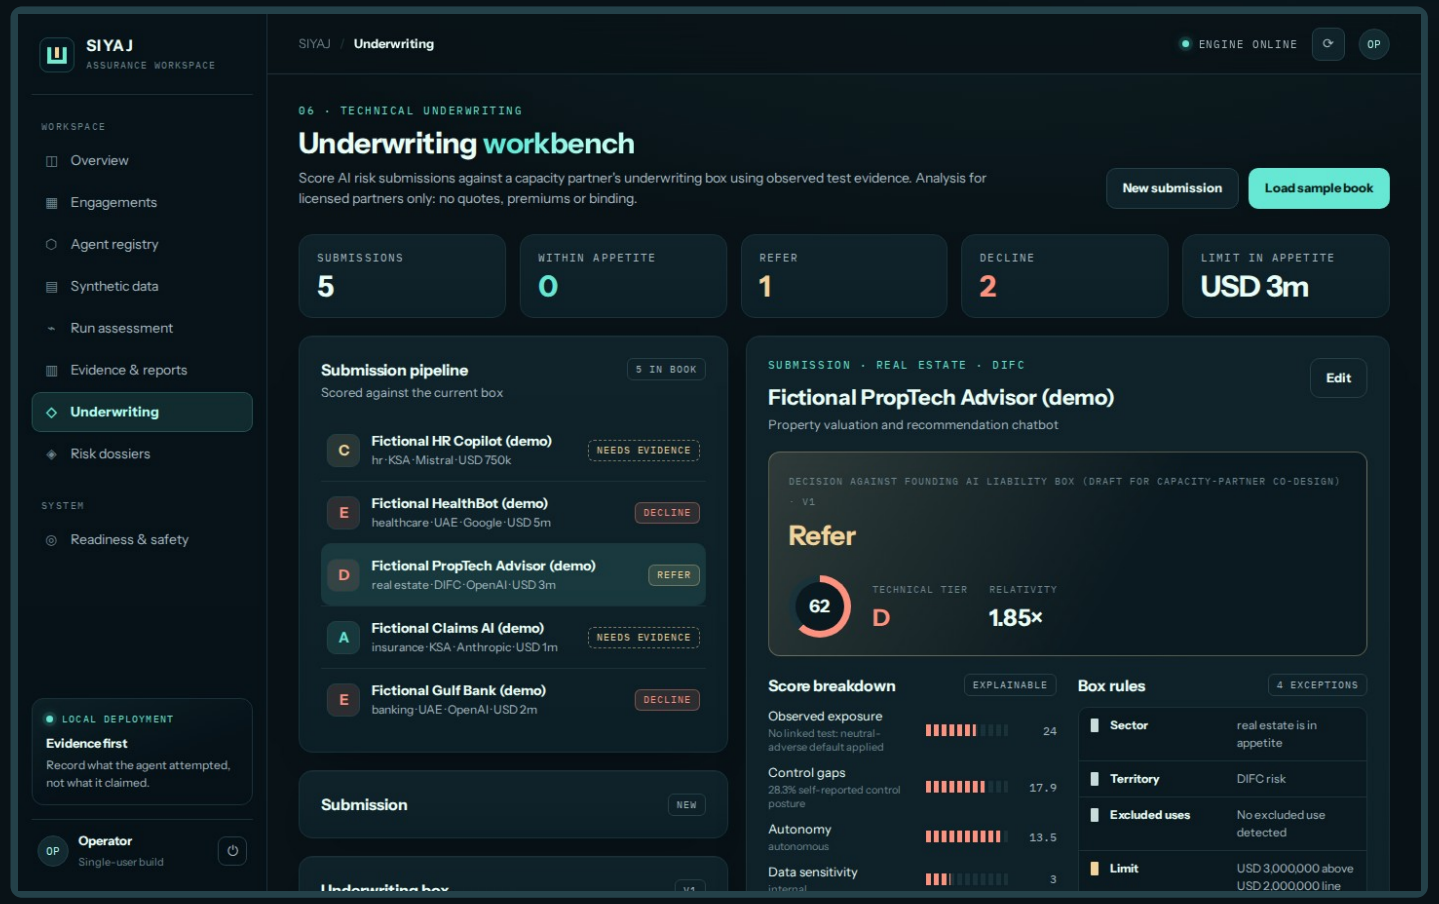

Accept, refer, decline or needs evidence, each with its reason.

Conditions to clear

What must change before a risk can be referred or bound.

Concentration view

Limit by model provider against the partner's cap.

The cover we are designing with our partners.

Wording, limits and pricing will be set by the licensed carriers who write it. Not yet available.

IN DESIGN

AI errors and hallucinations

Financial loss to customers from incorrect AI output relied on in business.

IN DESIGN

Agent actions beyond authority

Transactions, record changes or messages outside the approved scope.

IN DESIGN

AI-driven data exposure

Disclosure through retrieval, prompts or agent tools.

IN DESIGN

Regulatory defence for AI

Response and defence costs for investigations into AI use.

A licensed route, market by market.

Our planned path follows how the Gulf insurance market is regulated.

HUB

DIFC

Underwriting agents and coverholders are licensed by the DFSA for Insurance Management. 40+ MGAs already operate there, with Lloyd's access.

UAE ONSHORE

Fronting

No onshore MGA regime. Onshore risks are written by a locally licensed insurer, with international capacity behind it as reinsurance.

SAUDI ARABIA

KSA

The Insurance Authority approved licensing requirements for underwriting activities in March 2026: local office, PI cover, business plan.

All three routes are planned. SIYAJ is not yet licensed in any market.

Honest about status. Clear about direction.

We earn each stage before claiming the next.

AVAILABLE NOW

Stage 1

Technical underwriting

Readiness assessments, technical submission packs, the underwriting workbench.

IN CONVERSATION

Stage 2

Programme on partner paper

First policies by licensed carriers, underwritten to a co-designed box.

PLANNED

Stage 3

Licensed underwriting agent

Delegated authority in DIFC and, later, Saudi Arabia.

SIYAJ does not quote, bind, sell or advise on insurance today. Policies will be issued by licensed carriers.

Tell us which side of the market you are on.

AI COMPANIES

A 20-minute call

Your system, your stalled deals and what a bad day looks like.

CAPACITY PROVIDERS

An appetite session

Lines, limits and the evidence you would want per risk.

BROKERS

A placement fit

How SIYAJ submissions support your AI clients.
