SIYAJ

STRATEGY 2026–2028 · CONFIDENTIAL

The technical underwriter for AI risk in the Gulf.

SIYAJ connects the companies deploying AI with insurance capacity that cannot yet evaluate them. This is how we earn the pen, stage by stage.

Five choices. One integrated strategy.

Structured as Playing to Win: every later slide expands one of these rows.

CHOICE	SIYAJ
Winning aspiration	**Become the Gulf's reference technical underwriter for AI risk: the party capacity providers trust to say accept, refer or decline.**
Where to play	**AI vendors and deployers selling into regulated Gulf enterprises. Capacity from Lloyd's via DIFC, regional reinsurers and local fronting carriers. DIFC first, UAE onshore second, KSA third.**
How to win	**Underwrite on observed behaviour, not questionnaires. Let founding partners shape the box. Be Gulf-native: Arabic testing, regional rules, local paper.**
Capabilities	**A technical test engine, licensed underwriting judgment on the team, capacity relationships and regulatory permissions.**
Management systems	**Stage gates with kill criteria, a monthly underwriting committee with capacity partners, evidence and loss metrics reviewed every month.**

The coverage gap is real, and it is widening.

Incumbents are retreating from AI risk while specialists prove it can be underwritten. No one is doing it for the Gulf.

EXCLUSIONS

Carriers are writing AI out

AIG, W. R. Berkley and Great American have sought permission to exclude AI-related claims from standard corporate liability policies.

PROOF OF DEMAND

Specialists show it can be written

Armilla writes up to USD 25m per organisation as a Lloyd's coverholder. Testudo, AIUC and Munich Re aiSure are also writing AI risk.

THE OPENING

None of it is built for the Gulf

The specialists sit in London and North America. Gulf AI deployers still rely on generic wordings that are silent on AI.

The window: demand is visible, specialist capacity exists, and the Gulf has no local technical underwriter yet.

Carriers will not write what they cannot measure.

Both sides are blocked by the same missing capability: credible technical evaluation of AI behaviour.

AI COMPANIES

Deals stall on liability
Enterprise buyers ask who pays when the AI is wrong.

No affirmative cover
Generic wordings are silent or excluding.

Procurement friction
AI security questionnaires with no evidence to attach.

THE BOTTLENECK

Technical evaluation of how AI behaves.

Whoever owns the evaluation owns the flow of submissions, the trust of capacity and, eventually, the pen.

INSURANCE CARRIERS

No in-house AI evaluation
Underwriters cannot test agents themselves.

Correlated loss fear
One model failure could trigger many claims.

No loss history
Pricing needs evidence that does not exist yet.

Own the evaluation. Earn the pen in stages.

Three rules that decide what we do, and what we refuse to do, at every stage.

RULE 1

Evidence before capacity

We ask partners for capacity only once we can show tested, scored submissions they can audit.

RULE 2

Capacity before scale

No distribution push until a partner has co-designed the box and agreed the line.

RULE 3

Gulf before global

Win where local paper, Arabic systems and regional regulators make us the obvious choice.

Every action must improve the evidence, deepen the capacity, or secure the permission. If it does none, we do not do it.

Narrow on purpose. Saying no is the strategy.

Choices for the first 24 months. Each "no" protects loss experience or regulatory standing.

PLAY	
Insureds	AI vendors and deployers with regulated Gulf buyers: fintech, insurtech, real-estate tech, enterprise SaaS, gov-tech suppliers
Risks	AI errors, agent actions beyond authority, AI data exposure, regulatory defence
Limits	USD 1–2m delegated, up to USD 5m on referral
Capacity	Lloyd's via DIFC coverholders, regional reinsurers, local fronting carriers
Channel	Regional brokers for placement; direct for assessments

DO NOT PLAY (YET)	
Frontier labs	Model developers with systemic, uncapped exposure
Physical autonomy	Autonomous vehicles, robotics, medical devices
Clinical AI	Diagnosis and treatment decisions
Trading bots	Autonomous financial trading and crypto
Personal lines	Consumer products and generic cyber

Three advantages that compound.

Each one is hard to copy alone. Together they make SIYAJ the default technical partner for AI risk in the region.

TEST, DON'T ASK

Underwriting on observed behaviour

12 probes, 5 weighted factors and 10 box rules. Every number traces to evidence.

PARTNERS SHAPE THE BOX

Co-designed appetite

Founding capacity partners set limits and thresholds, creating trust, shared data and switching costs.

GULF-NATIVE

Local paper, local language

Arabic and English testing, regional rule mapping and fronting relationships global specialists lack.

LIVING RISK

Continuous retesting

Retests after model or tool change turn a one-off policy into monitored risk and loss control.

Moat over time: every tested submission adds to a Gulf-specific failure library and, later, loss experience no newcomer has.

Three revenue engines, unlocked in order.

Each stage funds and de-risks the next. We never skip a licence to reach revenue faster.

STAGE	WHAT WE DO	HOW WE EARN	PERMISSION
1 · Technical underwriting	Readiness assessments for AI companies; technical reviews of submissions for carriers and brokers	**Assessment fees (AED 30–95k); per-submission review fees**	Technical services; confirm KSA classification
2 · Programme on partner paper	Underwrite to a co-designed box through a licensed host or partner MGA	**Share of underwriting commission; assessment and retesting fees**	Partner's licence
3 · Licensed underwriting agent	Delegated authority in DIFC and, later, KSA	**Commission on premium, profit commission, monitoring subscriptions**	DFSA Insurance Management; KSA underwriting licence

Commission and profit-commission terms are negotiated with each capacity partner. All figures are planning assumptions.

What the model has to prove.

Illustrative revenue to SIYAJ from commission at Stage 3, before expenses. Stage 1 must fund itself first.

GROSS WRITTEN PREMIUM	15% COMMISSION	20% COMMISSION	25% COMMISSION
USD 2m	USD 0.30m	**USD 0.40m**	USD 0.50m
USD 5m	USD 0.75m	**USD 1.00m**	USD 1.25m
USD 10m	USD 1.50m	**USD 2.00m**	USD 2.50m

15

paid assessments in year 1 at AED 30–60k fund the build before premium flows (AED 0.45–0.9m)

1

tested submission is the unit of value: it earns a fee now and becomes premium later

Profit commission aligns SIYAJ with loss experience: we earn more only when the evidence proves right.

<60%

target loss ratio partners need to see before they widen the line (assumption to validate)

The draft box we will take to partners.

A starting position for co-design, not a final appetite. Encoded in the workbench today.

PARAMETER	DRAFT	RATIONALE
Sectors	**Banking, insurance, technology, retail, real estate, HR**	Buyers demand cover; failure modes are testable
Territories	**UAE, KSA, DIFC, ADGM**	Local paper and regulators we can reach
Line	**USD 2m delegated; refer to USD 5m**	Contain tail risk while loss data builds
Autonomy	**Up to human-approved actions; autonomous refers**	Agent actions are the hardest risk to bound
Evidence	**SIYAJ test required; at least 80% scored coverage**	No evidence, no line
Exposure	**Refer above 35; decline above 65**	Hypothesis: tested failure predicts claims
Controls	**Identity, human approval, logging, kill switch**	Minimum for containment and investigation
Aggregation	**At most 40% of limit per model provider**	One model failure must not sink the book

The underwriting workbench is already built.

Local MVP with 10 passing engine tests. Analysis for licensed partners; no quotes or binding.

Built

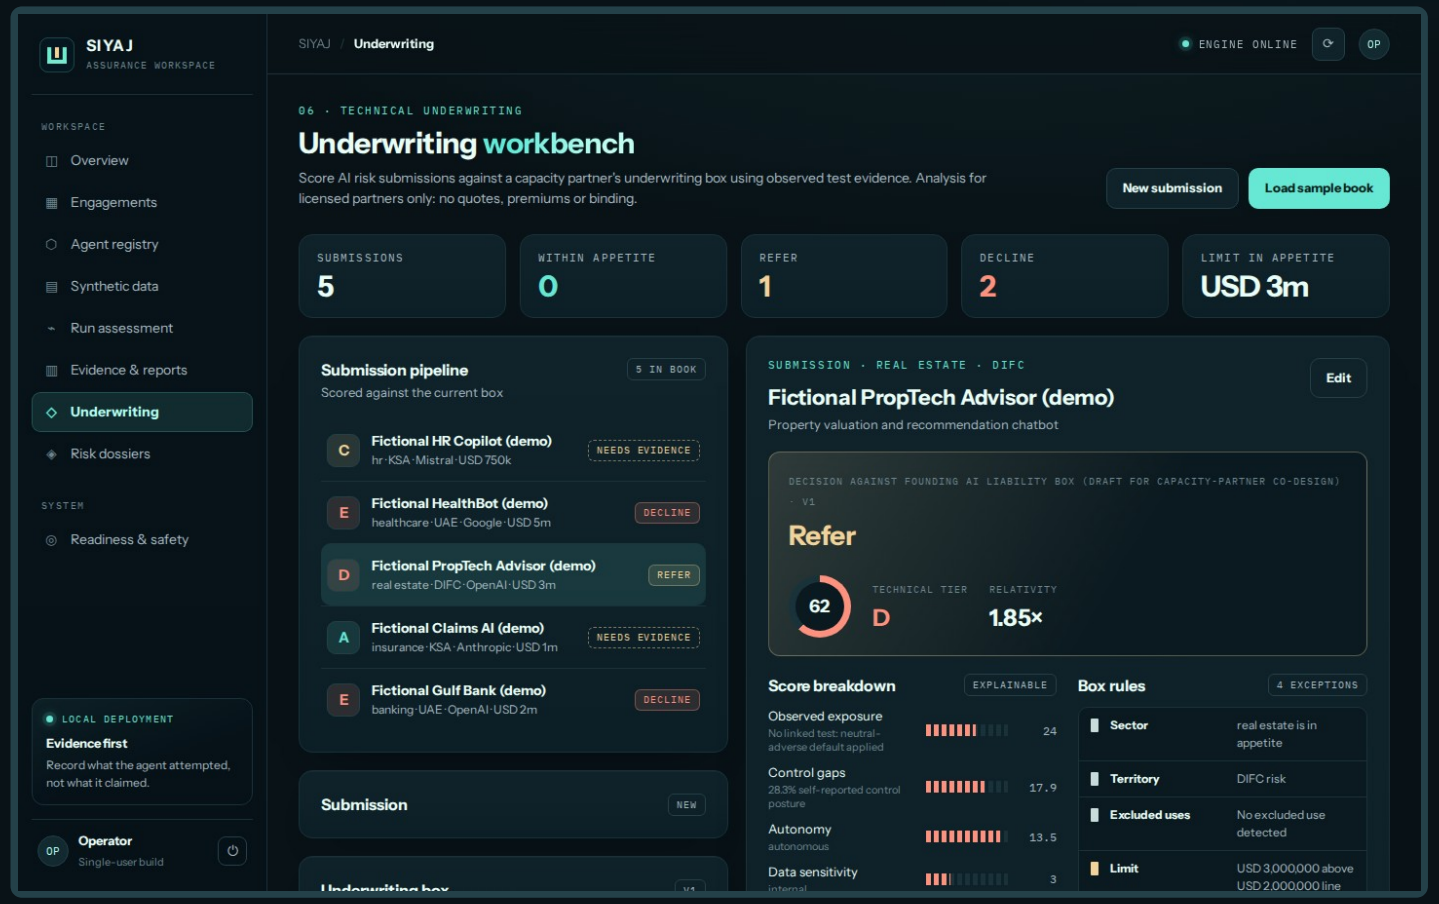

Submission intake, 5-factor technical score, 10 box rules with reasons, conditions, re-scoring on box change, concentration view, evidence fingerprint.

Next

Isolated test execution, partner portal, bordereaux export, retest scheduler, signed reports.

Never

Quotes, premiums or binding until licensed.

The licence path is part of the strategy.

Underwriting authority is regulated in every Gulf market. Sequencing permissions is a strategic choice.

HUB

DIFC

Underwriting agents and coverholders are licensed by the DFSA for Insurance Management. 40+ MGAs already operate there, with Lloyd's access.

UAE ONSHORE

Fronting

No onshore MGA regime. Onshore risks are written by a locally licensed insurer, with international capacity behind it as reinsurance.

SAUDI ARABIA

KSA

The Insurance Authority approved licensing requirements for underwriting activities in March 2026: local office, PI cover, business plan.

Until licensed: technical services only. No solicitation, quoting, binding, premium indication or insurance advice.

Capacity first. Demand in parallel.

A two-sided market starts with supply. Brokers connect the two sides.

CAPACITY TRACK

15 conversations: Lloyd's syndicates writing AI, regional reinsurers, fronting carriers

3 box workshops at underwriting level

1 founding partner with a capacity term sheet

DEMAND TRACK

30 AI companies with stalled enterprise deals, conflict-screened

15 paid readiness assessments

10 tested submissions ready for the partner

Brokers are the bridge: two regional broker alliances bring AI clients to the box and place the cover.

Five gates. Each one can stop us.

We spend more only when the previous gate is passed. Kill criteria are written now, not later.

WHEN	MILESTONE	GATE TO PROCEED
Q4 2026	Written employer clearance; entity and brand cleared; insurance co-founder recruited	**No clearance or no co-founder: stop**
Q1 2027	5 paid assessments; draft box; 3 capacity conversations at underwriting level	**One partner agrees to co-design the box**
Q2 2027	Box v1 agreed; licensed host selected; DFSA application started	**Written capacity term sheet**
H2 2027	First policies bound on partner paper; retesting live	**Referral and loss metrics within partner limits**
2028	DFSA Insurance Management licence; KSA underwriting application	**Premium target met and partner renews**

The team gap is the first risk to close.

Capacity providers back underwriters, not platforms. A licensed underwriter on the founding team is non-negotiable.

HAVE

Technical and governance depth

Founder brings AI security, cyber strategy and AI governance expertise, plus the working test engine.

HIRE FIRST

Specialty underwriter, co-founder level

Credibility with capacity and the experience regulators expect of authorised individuals.

HIRE FOR LICENCE

Compliance and risk officer

Required for a DFSA licence; owns conduct, reporting and partner audits.

ADVISE

Actuarial and reinsurance advisers

Pricing relativities, aggregation modelling and introductions to capacity.

How we will know it is working.

One north star, a few leading indicators, and governance shared with capacity partners.

NORTH STAR

Premium bound within the box

Gross written premium on partner paper that passed the box without exception.

LEADING

Flow and quality

Tested submissions per month, days from submission to decision, share referred, partner acceptance of referrals.

LAGGING

Proof of the evidence

Loss ratio against plan, renewal retention, drift caught by retesting before a claim.

Governance: monthly underwriting committee with each capacity partner, quarterly box review, annual independent model validation.

What could break this, and what we do about it.

RISK	MITIGATION
Correlated loss from one model provider	Aggregation caps per provider, exclusions for frontier labs, reinsurance behind partner paper
Adverse selection	Test-required box; retesting after material change; conditions before binding
No loss history to price from	Conservative lines, profit commission alignment, shared data with partners
Regulatory classification	Licensed partner first; written counsel opinions in each market before activity
Capacity withdraws	Two capacity partners before Stage 3; portable box and evidence
Global specialists enter the Gulf	Offer SIYAJ as their local technical partner rather than compete head-on
Founder conflict of interest	Gate zero: written employer clearance before any commercial step

Three moves. In this order.

01

Clear the founder gate

Written employer clearance, then recruit the underwriting co-founder.

02

Open the capacity track

Box workshops with three capacity providers at underwriting level.

03

Prove the evidence

Five paid readiness assessments with conflict-screened AI companies.
